CS 218 – Assignment #4

Purpose: Learn to use arithmetic instructions, control instructions, compare instructions, and

conditional jump instructions.

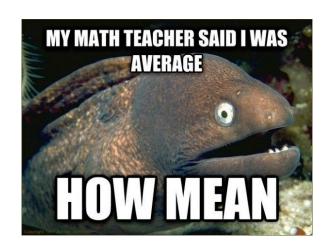

Due: Friday (2/07)

Points: 45

Assignment:

Write a simple assembly language program to find the minimum, estimated median value, maximum, sum, and integer average of a list of numbers. Additionally, the program should also find the sum, count, and integer average for the negative numbers. Further, the program should also find the sum, count, and integer average for the numbers that are evenly divisible by 7.

Do **not** change the data types (double-words) as defined below.

Declare the values:

```
4224, -1116,
                                  1542,
                                         1240,
                                                 1677 , -1635,
                                                                 2420,
                                                                        1820,
                                                                               1246,

           dd
```

You may declare additional variables if needed. All data is *signed*. As such, the IDIV/IMUL would be used (not DIV/MUL). The JG/JGE/JL/JLE must be used (as they are for signed data).

Since the list is not sorted, we will estimate the median value. Since the list length is even, the estimated median will be computed by summing the two middle values and then dividing by 2.

Note 1, no template is provided. Create the program source file based on the previous assignments. *Note 2*, no debugger input file is provided. Create the debugger input file based on the previous assignments.

Submission:

When complete, submit:

• A copy of the *source file* via the class web page (assignment submission link) by 11:59 PM on the due date. Assignments received after the due date/time will not be accepted.

Debugger Commands:

Due to the looping, when debugging assignment #4, you should learn to set breakpoints within the program.

Create an input file for the debugger. Some useful commands might include:

```
x/100dw &1st
x/dw &1ength
x/dw &1stMin
x/dw &estMed
x/dw &1stMax
x/dw &1stSum
x/dw &1stAve
x/dw &negCnt
x/dw &negSum
x/dw &negAve
x/dw &sevenCnt
x/dw &sevenSum
x/dw &sevenAve
```

The commands should be placed in a file (such as 'a4in.txt) so they can be read from within the debugger. The debugger command to read a file is "source <filename>". For example, if the command file is named 'a4in.txt',

```
(qbd) source a4in.txt
```

Refer to the debugger input files from the previous assignments for examples. This will include outputting the results to a file.
